Agenda

- 2025 em Perspectiva
  - Resumo de versões e novos recursos no período
  - Principais eventos e encontros do ano
- O que temos para 2026
  - Delphi 31 Anos e Contando!
  - Novos marcos regulatórios (segurança)
  - Repositórios que valem uma visita
  - Agenda prévia de eventos
- Próximos updates do RAD Studio (roadmap)

Embarcadero Technologies Copyright 2026

Versões e Novos Recursos de 2025

- **Março/25**
  - Lançamento do RAD Studio 12.3 Athens com foco principal na versão inicial de 64 bits da IDE, juntamente com diversas melhorias em funcionalidades existentes e foco significativo em qualidade
  - Disponibilizamos (no gerenciador de pacotes GetIt) uma nova GUI para o Android SDK Manager
- **Maio/25**
  - Nova versão do Konopka Signature VCL Controls
  - Laçamento do InterBase 2020 Update 7
  - Disponibilizamos (no gerenciador de pacotes GetIt) o FMX Linux para Delphi 12.3

Embarcadero Technologies Copyright 2026

Versões e Novos Recursos de 2025

- **Setembro/25**
  - Lançamento do RAD Studio 13 Florence, versão final de 64 bits da IDE, compilador Clang atualizado para C++Builder, extensões da linguagem Delphi, componentes de IA, um assistente de IA, juntamente com diversas melhorias em funcionalidades existentes
  - Disponibilizamos no GetIt o Delphi Upgrade Advisor Wizard e o SmartCore AI Components Pack
- **Outubro/25**
  - Lançamento do InterBase 15 com foco principal em criptografia e segurança: um dos recursos mais relevantes do banco de dados tornou-se ainda mais robusto

Eventos Online de 2025

- 30º Aniversário do Delphi (fevereiro de 2025): Comemorado com uma série de 30 webinars
- RAD Studio Live 2025 (fevereiro de 2025): Especial de 30 anos!
- CodeRage 2025 (1 a 10 de dezembro de 2025): Conferência online com sessões sobre IA, migração para Linux e otimização de performance
- AI CodeCamp 2025 (16 a 20 de junho de 2025): Evento focado em integrar IA (como Gemini e OpenAI) em aplicações Delphi e C++Builder
- Dev Lounge Temporada 2025: Assuntos variados e convidados, episódios mensais
- Papo Dev: Bate papo descontraído a partir dos escritórios da Embarcadero do Brasil, evento trimestral

Embarcadero Technologies Copyright 2026

Eventos Presenciais de 2025

- Embarcadero Conference Brazil 2025
  - **Date:** September 11, 2025
  - **Location:** Amcham Business Center, São Paulo, Brazil
- ITDevCon 2025 – The Delphi European Conference
  - **Date:** November 6–7, 2025
  - **Location:** Milan, Italy
- Grey Matter x Embarcadero Developer Conference
  - **Date:** May 7, 2025
  - **Location:** Wellcome Collection, London, UK
- Delphi na Estrada 2025
  - **Date:** May 12–23, 2025
  - **Locations:** Multiple cities in Brazil (Porto Alegre, Chapecó, Curitiba, Campinas, Rio de Janeiro, Teresópolis, Brasília, and Fortaleza).
- Delphi Summit 2025
  - **Date:** June 5–6, 2025
  - **Location:** H20 Esports Campus, Purmerend (near Amsterdam), Netherlands

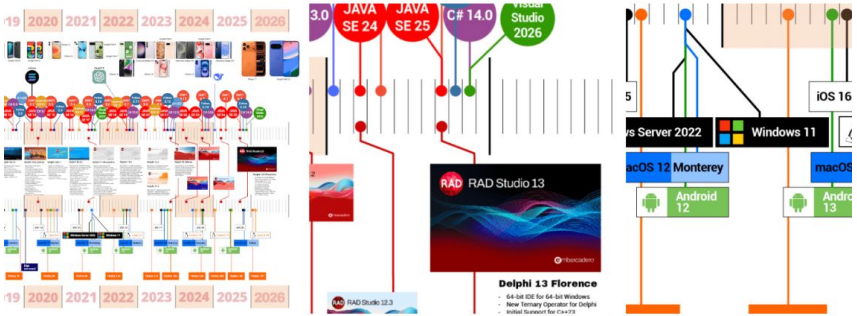
Delphi 31 Anos!

Delphi is 31! Get The Updated DELPHI INNOVATION TIMELINE!



Embarcadero Technologies Copyright 2026

Regulations: A Broad Overview

Three (relatively) new regulations:

DORA

CRA

NIS2

Internal Only - Embarcadero Confidencial

Regulations: A Broad Overview

DORA (Digital Operations Resilience Act)

Where it applies	• Directly to all EU Member States.
Who it applies to	• Primarily **financial sector** (banks, insurers, payment processors – and their **digital suppliers**).
What it means for developers	• If your software *even touches* a financial organization (as a cloud service, an API, or a third-party tool), you may be part of their operational resilience reporting and testing obligations. • You'll receive demands for more robust error handling, incident logging and reporting, and stronger dependency controls.
Bottom line	• DORA forces financial systems to demonstrate resilience, and developers must proactively build that resilience into their code.

Internal Only - Embarcadero Confidencial

Regulations: A Broad Overview

CRA (Cyber Resilience Act)

Where it applies	• Directly to digital products sold within the EU.
Who it applies to	• **Any product with digital elements** (software, hardware with firmware, online services) sold or distributed in the EU.
What it means for developers	• You must assume **security by design**: software must be shipped with **no known exploitable vulnerabilities**, **secure defaults**, and documentation security considerations. • You're required to provide an **SBOM**, **vulnerability management**, and **longer update/support lifecycles** for digital products. (Enforced 2027)
Bottom line	• CRA moves cybersecurity from **optional** to **mandatory** for **all software products sold in the EU**, imposing legal requirements for secure development practices, patching, transparency, and documentation.

Internal Only - Embarcadero Confidencial

Regulations: A Broad Overview

NIS2 (Network & Information Security Directive 2)

Where it applies	• To EU Member states, requiring them to implement national laws.
Who it applies to	• A **broad set of entities** deemed essential: energy, transport, health, digital infrastructure, cloud providers, SaaS platforms, and others critical to national and EU infrastructure.
What it means for developers	• If your product is part of an essential infrastructure or critical digital service, you'll need to support **risk assessments**, **incident reporting** processes, **supply-chain security**, and stronger overall cybersecurity hygiene (e.g., MFA, encryption, logging). • Senior management can now be held **personally liable** for willfully failing to comply.
Bottom line	• NIS2 sets a higher baseline of cybersecurity across key sectors. Developers must help build systems capable of detecting, responding to, and reporting security events quickly, often within tight timeframes.

Internal Only - Embarcadero Confidencial

Summing It Up…

- **DORA** is about operational resilience in the financial ecosystem.
- **CRA** is about product security: secure builds, secure defaults, transparency.
- **NIS2** is about mandatory cybersecurity across critical sectors.

Internal Only - Embarcadero Confidencial

Keeping the “House” Secure: SCA

👷 Before you build a house, you need to **inspect the materials**.

- Are the bricks solid?
- Are the windows sturdy?
- Are the locks safe?

👨‍💻 For software products, this is called **Software Composition Analysis (SCA)**.

- Are my libraries up to date?
- Are my third party components fully patched?
- Are my suppliers trustworthy?

Now supports Delphi SCA!

sonarqube | DerScanner | BLACKDUCK

Internal Only - Embarcadero Confidencial

Keeping the “House” Secure: SAST

They all support Delphi SAST!

👷 While you build a house, you need **best building practices**.

- Is the foundation level?
- Was the house properly framed?
- Is the electrical and plumbing up to code?

👨‍🔬 For software products, this is called **Static Application Security Testing (SAST)**.

- Are high quality coding practices used?
- Is memory managed in a safe way?
- Is user data handled properly?

sonarqube | DerScanner | Pascal Analyzer

Internal Only - Embarcadero Confidencial

Keeping the “House” Secure: SBOM

👷 After you build a house, you need **a home inspection**.

- Who supplied the building materials?
- What are the appliances make/model?
- Is anything under recall?

👨‍🏭 For software products, this is called a **Software Bill of Materials (SBOM)**.

- What 3rd party libraries are in this product?
- What versions were used?
- What open source licensing do they use?

📌 An SBOM is typically produced from a Software Composition Analysis (although it can be generated manually). DerScanner’s SCA for Delphi supports SBOMs.

Internal Only - Embarcadero Confidencial

O que é o SBOM e por que ele é tão importante este ano?

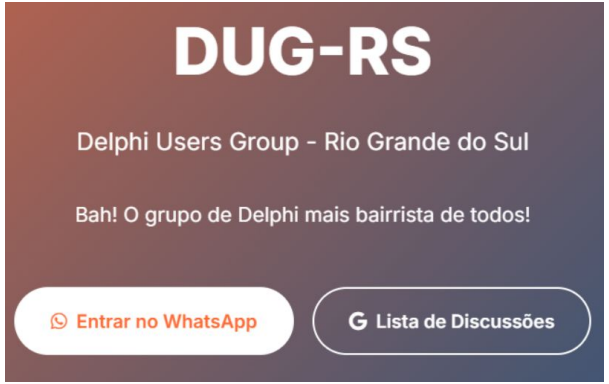
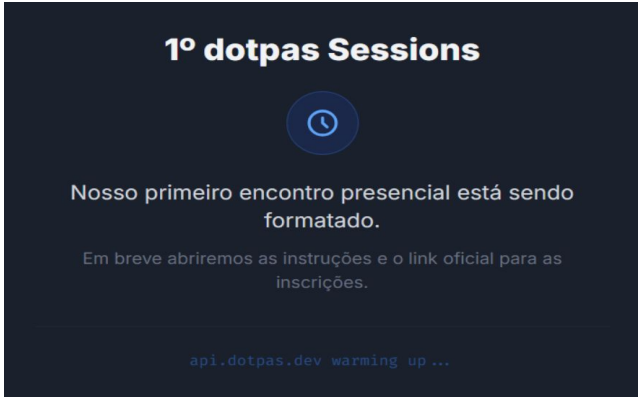
Agenda (prévia) de eventos





- **Dev Lounge** - episódios mensais iniciando em Março
- **Conference 2026** - em definição (Setembro/Outubro)

Embarcadero Technologies Copyright 2026

Coming soon - Delphi, C++Builder and RAD Studio 13.1:

- **Delphi:**
  - **Native Windows ARM support:** Target the next generation of Windows ARM devices with your existing codebase.
  - **Up-to-date mobile platform support:** Compliance for the latest OS and app store requirements.
  - **Enhanced developer productivity:** Incremental LSP improvements for faster navigation in library code.
- **C++Builder:**
  - **Modernized C++ development:** Upgrade Clang toolchain with many quality improvements.
- **Delphi, C++Builder and RAD Studio:**
  - **Smarter navigation:** Expanded built-in source bookmark capabilities.
  - **New FireMonkey style designer:** Faster, more flexible and modern UI styling.
  - **Quality improvements throughout:** Stability and polish across the entire product stack.

Please note that features are not committed until completed and GA released.
